

avRIO - WAREHOUSING INVENTORY DISTRIBUTION

WAREHOUSING INVENTORY LOGISTICS DISTRIBUTION

SUPPLYING, STORING, MANAGING AND DISTRIBUTING all manner of printed material and point-of-sale consumables is Avrio's business. Efficiency is our strength.

Whether you are a local business or a large corporation, your business activity will fluctuate in response to a range of factors. It could be your own promotional activities, seasonal and economic factors or even political and social changes. The biggest benefit of Avrio's warehousing and supply solutions is our ability to scale operations to your current and future needs. Whatever the pace, whatever the demands, to maximise value from your warehouse and supply systems you need a solution that moves with you.

Avrio's focus is tailor-made systems for strategic storage, inventory management, supply, logistics and distribution. We work with you, taking an overview of your company structure and business activity, in order to deliver reliable and cost effective systems for the management of your material.

WAREHOUSING

Idle warehousing space or excessive stock levels add unnecessary costs. Stocks stored in inappropriate locations will also lead to increased freight and handling, adding to costs and risk of damage. Avrio will structure a plan so that you pay only for what you need, when you need it, where you need it. Flexibility and scalability are just the beginning of Avrio's warehousing solutions. Other benefits include:

- Multiple warehousing in strategic locations across Australia.
- Coordinated sourcing and warehousing, which enables the tailoring of your logistics, improving process efficiency.

IDLE WAREHOUSING SPACE COSTS YOU THE SAME AS IT DOES WHEN FULL, ADDING UNNECESSARY OVERHEADS. WE'LL STRUCTURE A PLAN WHERE YOU PAY ONLY FOR **WHAT YOU NEED, WHEN YOU NEED, IT WHERE YOU NEED IT.**

INVENTORY MANAGEMENT

Large and small businesses often neglect inventory management. Management and supply of support items such as business forms and point of sale products can be overlooked as you focus on your company's core services and products. This can lead to unnecessary costs and inefficiencies.

Avrio's multiple warehouse computer system accurately manages all inventory products to ensure the support side to your business is running efficiently. Our sophisticated and comprehensive reports analyse your inventory on all levels, giving you control to make effective management decisions on every aspect, from procurement through to distribution and usage.

REPORTS

STOCK-ON-HAND REPORTS – in both units and value for single locations or multiple warehouses.

PRODUCT SPECIFICATION REPORTS

RE-ORDER REPORTS – providing referral time, product bundling and averting costly rush orders.

DANGER-MARK REPORTS – to help eliminate nil stocks.

ON ORDER REPORTS – for stock orders and customer orders.

ROUTINE CROSS CHECKS – ensure that computer records accurately reflect physical stock levels in the warehouse system.

SALES, USAGE AND FORECASTING REPORTS – for individual products, groups of products, customers and groups of customers; Invaluable reports to identify peaks, troughs and patterns, providing information for procurement planning and business analysis information.

COST COMPARISON REPORTS – between products and cost curves to determine economical re-order quantities.

SUPPLY PERFORMANCE REPORTS

SLOW MOVING PRODUCT REPORTS

ORDERING

Efficient procurement, inventory management and warehousing will mean little if your customers, distributors and regional offices cannot efficiently order and receive the required products. Avrio offers the latest technology for online ordering, email or ordering by fax:

Online orders – An online catalogue or order form can be provided, showing product code, version date, description and unit of issue. Only a quantity need be entered next to each required product prior to emailing orders. Online orders are directed straight to the warehouses for immediate action.

Faxed orders – We can supply order pads showing description, version, date and unit of issue. Users need only enter a quantity and delivery address and order forms can be numbered to allow tracking if necessary. Faxed orders for products are actioned on the day they are received.

LOGISTICS AND DISTRIBUTION

Strategic placement, efficient management and smooth distribution of material can improve stock control, offering significant savings.

Avrio analyses the geographics and stock volumes in order to design and negotiate tailored packaging and freight agreements to minimise delivery time, handling and costs.

FOCUS ON LOGISTICS AND DISTRIBUTION:

- ⊙ Bulk shipment to strategically located warehouses to minimise freight;
- ⊙ Regional orders to minimise freight;
- ⊙ Frequency of orders by branches and distributors;
- ⊙ Alternative packaging methods to protect goods and reduce weight;
- ⊙ Tailoring unit order size for cost efficiency.
